

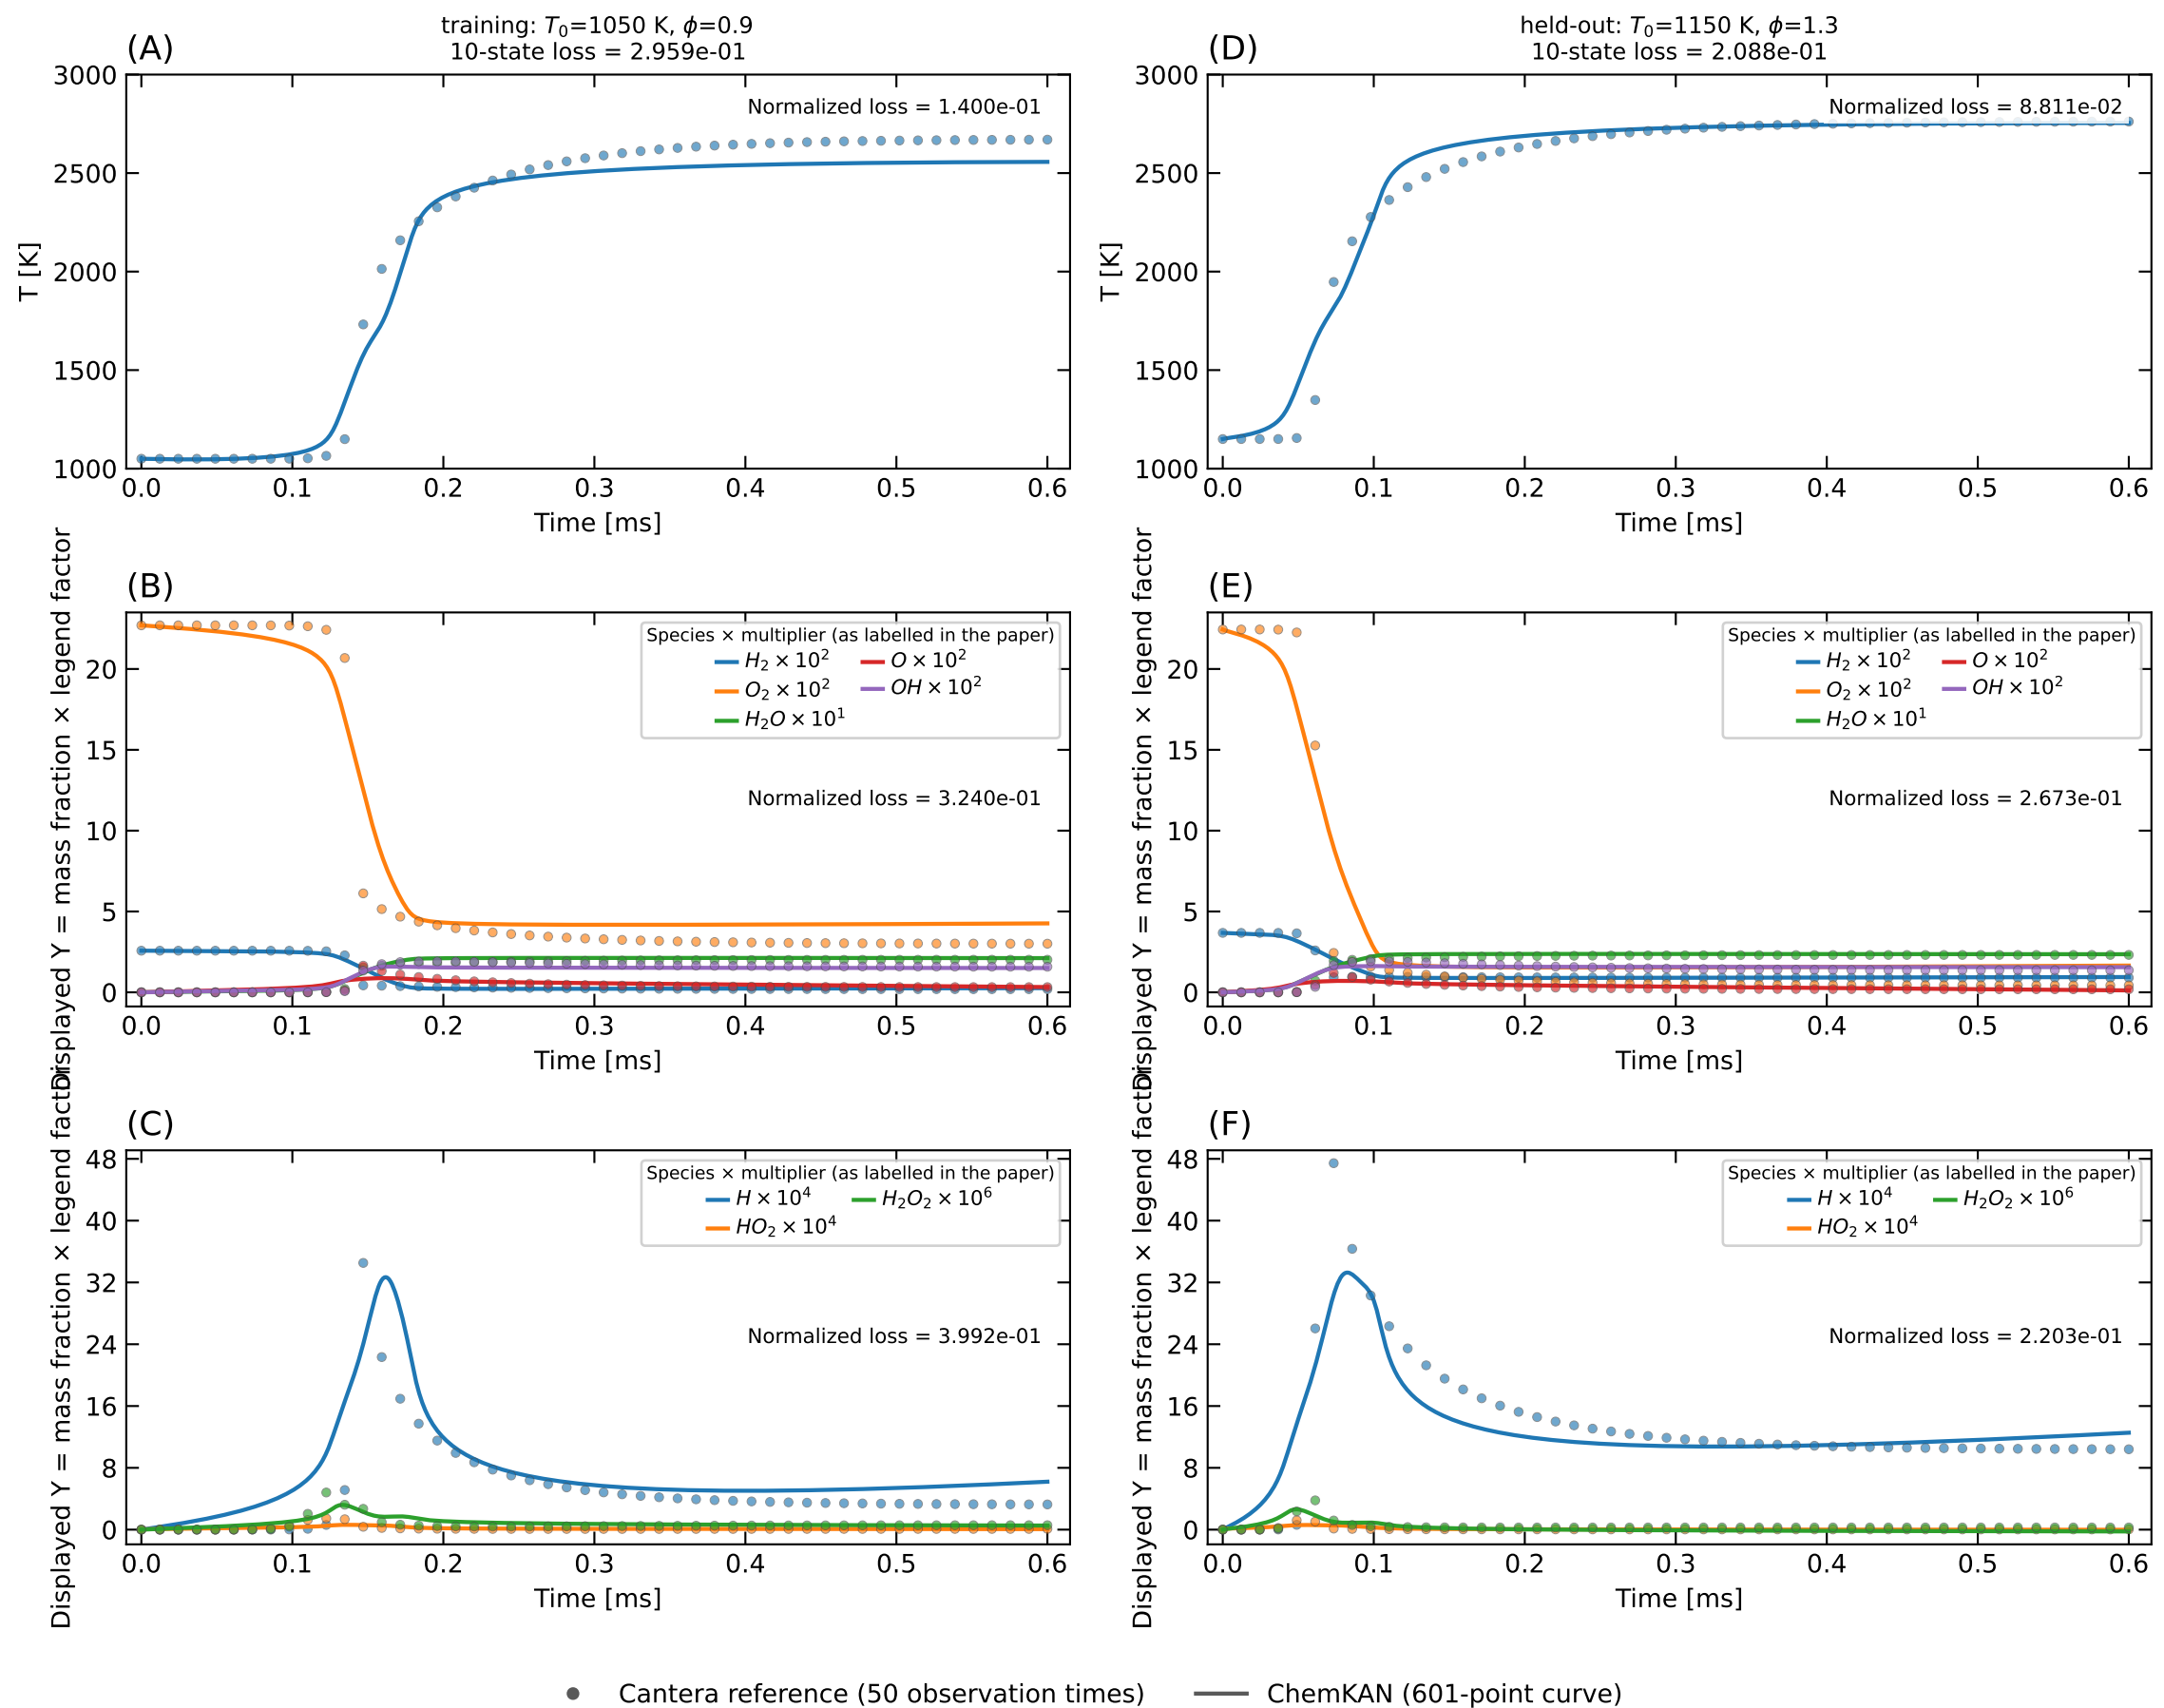

Figure 7 — Hnorm1 (labelled init comparison)

Read the legend:  $H_2O_2 \times 10^6$  means plotted 1 = actual mass fraction  $10^{-6}$ ; plotted 5 =  $5 \times 10^{-6}$ .

Multipliers follow the paper's printed Fig. 7 labels. The paper's drawn  $O_2$  and  $H$  curves match  $\times 10^1$  and  $\times 10^3$ , so those two curves sit 10× higher here than in the paper. Losses use unscaled states.
