Layer 2 (LeanKAN, 4 -> 6): out_i = phi_i1(h1) * phi_i2(h2) + phi_i3(h3) + phi_i4(h4). Orange: multiplied edges; blue: added edges.
ver the training states (ticks at the bottom = training states); each edge applies tanh to h first. (%) = term's share of the output's spread; x: the h1 and h2 edges form
